

Western Excelsior Products Featured in *Erosion Control*

5/22/2006

For Immediate Release

Rolled Erosion Control Products (RECPs) offer a unique set of advantages for erosion control professionals as they endeavor to protect our waterways. Engineered for performance and manufactured for quality, RECPs provide consistent, economical and reliable protection against the forces of rainfall, rainsplash and flowing water. RECPs are used in challenging and demanding applications.

Erosion Control, the journal of the International Erosion Control Association (IECA), has recently published an article describing a challenging project in Northern California. A steep hillslope required protection in a residential location. Western Excelsior *All Natural* products were utilized to meet the erosion control, aesthetic and environmental concerns of the project. The article can be found by following this link:
