FOR IMMEDIATE RELEASE:

Western Green announces a Manufacturing and Distribution Partnership Agreement with Filtrexx International.

Evansville, Indiana (February 16, 2020) – Western Green, a leading manufacturer of erosion and sediment control solutions, announced this week a manufacturing and distribution partnership agreement with Filtrexx International.

Filtrexx is the leader in providing innovative and sustainable solutions in the sediment control market including their Soxx technology for erosion and sediment control, pollutant removal and stormwater management. As the original inventors of compost filter sock technology, Filtrexx has designed and engineered sediment control solutions tailored for every application and specific needs of each project.

Western Green, and its associated erosion control brands North American Green and Western Excelsior, is the industry leader for manufactured erosion control products and holds the industry’s most complete product line ranging from short term ECBs to permanent HPTRM Anchored Systems. The company is particularly fortunate with its outstanding industry-leading distributors covering the United States and Canada.

The partnership was formed out of the desire for both companies to serve the industry, our valuable distributors, and contractors to a greater degree. The partnership also strengthens our joint leadership positions with erosion and sediment control products. This partnership will allow for increased sediment control specification efforts with engineering through our collaborative expert design guidance. In addition to increased specification work, the partnership will also increase our shared resources for distributors and their customers. This partnership will focus in 2020 in the Southern, Atlantic coast, and Midwest regions of the United States and will include a manufacturing partnership centered in the Southeast.

We are humbled by this partnership and hold confidence in the additional value it will bring to our distributors. We look forward to continued growth alongside our distributors.

About Filtrexx International
Filtrexx International is a leading provider of innovative and sustainable products and services for use in erosion and sediment control, stormwater management and low impact development. Filtrexx technology is used in diverse applications such as perimeter control, inlet protection, check dams, slope interruption, runoff diversion, sediment traps, channel protection, bank stabilization, living walls and filtrations systems. Filtrexx is a wholly owned subsidiary of SWM International (NYSE: SWM). To learn
